Final Project with AI: Itemized List and Script

(I recommend following the list)

Script:

Users should begin their navigation on the home page when they open the app. They will be greeted with a welcome message and have the options to be directed to projects or add more photos to their cosplay gallery. They will have two buttons separate from the navigation bar to navigate away. When the app has been used the user will see the last photo they took displayed on the home page.

The user will also have four navigation buttons they can switch between when opening the app.

- Home
- Cosplays
- CosPlans
- Projects

The user also has the option to adjust the settings with the 'Gear' button at the top of the screen. The 'Gear' button is available on all the main navigation pages. The user will be able to adjust between light and dark mode. The user can also adjust the grids for the photos within the cosplays and projects, and adjust how many photos in each column. This is a number between 1 - 4 pictures per row.. The users can also set how many projects they want to have. This can be from 1 - 10 projects. These changes once adjusted are reflected throughout the app. If the user wants to save any of these changes they press 'Done'.

Users can navigate to any page at any time. Except when making a new/editing project.

Once the user has adjusted their desired settings they can navigate away from the 'Home' page. On the 'Cosplays' page this is a gallery where the user can see their cosplay photos as well as take new ones. If the user has adjusted how many photos they can see per row, they will see it reflected here. The users can also select the 'Camera' button and they will be able to add another photo to the gallery. This new photo will then be displayed on the 'Home' page. The users can navigate back to it and see its change. They will also see the photo added into the gallery with the rest of the photos. When selecting a photo the users can then see the full photos and have the option to close the pop up screen or delete the photo. If the user would like to delete the photo they can select the 'Delete' button and they will be prompted to make sure they want to complete the action or close out. If they delete the photo with the second 'Delete' button they will see the photo disappear from the gallery.

The user can then navigate away from the 'Cosplays' page and navigate to 'CosPlans'. This is a simple list that lets the user keep track of the cosplays they would like to do and cosplays they have already done. This is a simple task list. When the user presses the '+' button they can add a new Cos-Plan to the list. The user then has the option to check off this item and it will then be filed under the 'Completed Cosplays' category with a check mark to indicate its completion. From either category the user can swipe left to delete the list item. When they do this the user will be prompted to make sure they want to complete this action or close. When they select 'Delete', the list item will go away. This list is not limited to a specific number.

Then the user can navigate away from the 'CosPlans' and navigate to 'Projects'. This is a more complex tab. Immediately looking at the screen the user won't have any projects saved. The user can make a project where they will be directed to a new page when they click the '+' button. In the new page they will enter a title, description, and a list of to dos for their project. They enter the todo into the box and press the '+' button. They can also delete do's with the red 'X' next to each item. If the user would like to not add a new project, they can navigate away with the back button.

Once the user fills in this information, they can then 'Create the Project' with the button. Once the user makes their project it will be saved in their project list. The user can then see the title and the description in the list. When they select the project they can see all that information again and the to do list. When the user selects an item in the to-do list that item will be moved to a completed category, and their project progress is tracked. So when they finish a task, they will see a percentage of how much their project is complete. So if they have 4 tasks and finish one, 25% will be done. The user can mark and unmark these items.

In this same page the user can also take photos that will be saved in the project so the user can keep track of their progress as they finish tasks. They can add photos with the 'Camera' button in the project page. In the settings page the user can set the picture grid amount from 1 - 4, and this will be reflected in each project. The user can also select the image and close out of it or choose to delete it. When they 'Delete' an image with the button, they will be prompted to make sure this is what they would like to do. Then the user can delete the image. If the user would like to delete a project, they will have to go back to the list and they will swipe left on the project and they can delete the project. They will once again be prompted to make sure this is what they would like to do and will have to hit the 'Delete' button again. If the user would like to edit a project they will need to click on the project and then click on the 'Pencil' icon in the top left corner. Here the user can edit all the details of the project and save it again. The changes will reflect back into the project. They can also navigate away from this page with a back arrow if they would like to edit the project.

If the user tries to make a project past their set project amount, that they set in the settings. The user will be prompted with an error that they can't make any more projects. They will also get the message if they try to make more than 10.

On the main list 'Cosplay Projects' page the user can navigate away to any page with the bottom navigation bar. User can swipe up to leave the app.

Itemized List:

- Home:
 - Welcomed to the application
 - Can navigate to Project Plan with 'Go to Projects'
 - Can see the last photo taken
 - Can navigate to the Cosplays page with 'Go to Cosplays'
 - User can update Setting with the 'Gear button' in the top right corner.
- Cosplays:
 - Photo album
 - Can take a new picture with the 'Camera' button.
 - Can select the photo to see the full image
 - Can delete any picture, user can select a delete button
 - Can select the gear icon and update the image grid amount from 1 - 4
 - User will be prompted to make sure they want to delete a photo
- CosPlans:
 - User can make a new Cosplan list item, pressing the '+' button, item will be saved in 'Cosplay To Do'
 - User can check off the items on the list, item will move to 'Completed Cosplays'
 - User can uncheck the items on the list, Item will move back to 'Cosplay To Do'
 - Users can delete the items on the list, user swipes left to delete item
 - User will be prompted to make sure they want to delete the list item
- Projects:
 - Create project
 - User can create a project by selecting the '+' button
 - User will navigate to a new page to create the new project, they will enter a title, a description and a list of to do'
 - When making the to do's they add the element into the text box and click the plus button. The user can delete the item with the red x
 - User will create the project with the 'Create Project' button
 - The project will display in a list on the 'Cosplay Projects' projects with the title and description
 - Edit project
 - When the user clicks on the project, they can select the 'Pencil' icon in the top right corner
